

Learning Panel and Mounting Panel Installation Instructions

Product Contents:

- Learning Panel
- Mounting Panel (if ordered)
- 2 Taper Connector Sets with Screws

Tools Required:

- Phillips head screwdriver
- Small (.0625) drill bit and driver
- Rubber mallet

1. Establish wall location.
2. Drill into the Mounting Panel so hardware will be hidden behind the Learning Panel. Secure the Mounting Panel to the wall with using appropriate hardware (*not included*). Wall mounting will vary due to wall stud or surface requirements and constraints i.e. (brick, block, drywall etc.) NOTE: Installation method of the Mounting Panel will vary by the wall type. *Learning Panels can be mounted directly to wood substrates only.*
3. Screw the provided taper connectors to the Mounting Panel after it has been secured to the wall.
4. Align the taper connectors on the Learning Panel to the connectors on the Mounting Panel. Slide Learning Panel downward to engage taper connectors. Tap downward with rubber mallet for full engagement of taper connectors.

Interchanging Learning Panels:

With a rubber mallet, simply tap upward on the bottom of the Learning Panel to disengage taper connectors.
